DESCRIPTORS: *Drugs, Silicon compounds, Skin,
*Ointments, *Antibiotics, *Healing, Surgery,
*Silicones.

In treatment of various ailments requiring protection of the skin from moisture or from contact with pathological fluids, or to prevent irritation or mortification, the use of silicone ointments fully meets the need. Even when a state of mortification is in progress their use (best with the type containing antibiotics) stops the mortification process in a short time, sometimes within 24 hours, and causes it to regress, thus facilitating spontaneous healing of the skin (Biological Sciences--Pharmacology, TT, v. 8, no. 7)

Results are given of an investigation of a system of
automatic control of the instantaneous accelerating
field when an equilibrium particle passes the centre of
an accelerating gap. The possibility of this system is
demonstrated, and the accuracy of the stabilisation is
estimated. (Author)
